DIFFERENTH Manifesto v1.0

The Founding Declaration of the General Logic of Difference

Author: Giedrius Grebliunas

Abstract

This document constitutes the first public declaration of the DIFFERENTH framework and its foundational principles.

DIFFERENTH is proposed as a General Logic of Difference, based on the premise that difference is the minimal condition for identification, information, structure, process and knowledge.

The manifesto introduces the conceptual foundations of DIFFERENTH, outlines the vision of DIFFERENTICS as a scientific discipline, DIFFERENTOLOGY as its philosophical counterpart and presents the ADP-TRIFORMER methodological framework for the analysis of difference-driven phenomena.

This publication serves as the initial public record of the DIFFERENTH system and its core principles as formulated in 2026.

1. Preface

Why This Document Was Created

Humanity has developed logical systems concerned with truth, numerical systems concerned with quantity and information theories concerned with communication and representation. However, there is no universal discipline whose primary object of study is Difference itself.

This document introduces DIFFERENTH as an initial attempt to establish a general framework for the study of Difference as a fundamental condition underlying identification, information, structure, process and knowledge.

Central Thesis

DIFFERENTH proposes that Difference is the minimal condition for any identification, information, structure, process or act of knowledge to exist.

2. What is DIFFERENTH?

First Formal Definition

DIFFERENTH is a General Logic of Difference that investigates the emergence, identification, relations, interactions and recursion of differences, as well as the structures arising from them.

The framework seeks to provide a universal language for describing how distinctions are formed, maintained, transformed and interconnected across different domains of inquiry.

Core Concepts

- Difference
- Distinction
- Identification
- Change
- State

These concepts constitute the primary analytical elements of the DIFFERENTH framework.

3. Why Difference Matters

The Fundamental Role of Difference

The significance of Difference can be expressed through the following sequence:

- Without Difference, there is no Identification.
- Without Identification, there is no Information.
- Without Information, there is no Structure.
- Without Structure, there is no Process.
- Without Process, there is no Knowledge.

This sequence forms the philosophical foundation of the manifesto and serves as the guiding principle for the development of DIFFERENTH.

Difference is therefore considered not merely one phenomenon among others, but a prerequisite for the possibility of all phenomena that can be identified, described, measured or understood.

4. The Vision of DIFFERENTH

Long-Term Objectives

The purpose of DIFFERENTH is to contribute to the development of:

- A universal model of Difference;
- An interdisciplinary theoretical framework;
- A new field of systematic inquiry;
- A common conceptual language connecting science, philosophy and information theory.

Positioning

DIFFERENTH is not intended as an alternative to existing sciences.

Rather, it seeks to function as a meta-level framework capable of identifying common patterns and principles across diverse fields of knowledge.

5. DIFFERENTICS

Introduction to the Discipline

DIFFERENTICS is proposed as the scientific and academic discipline dedicated to the study of differences, their relations, interactions and the structures, processes and emergent phenomena arising from them.

Scope of Study

The discipline focuses on:

- The nature of differences;
- Difference-based structures;
- Difference-driven dynamics;
- Recursive generation of diversity;
- Emergent systems arising from interacting differences.

Objectives

- To establish a coherent theoretical framework;
- To develop formal methodologies;
- To support interdisciplinary applications;
- To advance the scientific study of Difference.

6. DIFFERENTOLOGY

Philosophical Direction

DIFFERENTOLOGY is proposed as the philosophical and ontological study of Difference.

While DIFFERENTICS focuses on scientific investigation and formal modeling, DIFFERENTOLOGY addresses the deeper philosophical implications of Difference and its role in reality, existence, knowledge and meaning.

Distinction Between the Two Fields

DIFFERENTICS	DIFFERENTOLOGY
Scientific discipline	Philosophical discipline
Empirical models	Ontological models
Formalization	Interpretation
Methodological analysis	Philosophical inquiry
Applied research	Conceptual investigation

7. ADP-TRIFORMER

Introduction to the Methodology

ADP-TRIFORMER is the primary methodological framework proposed within DIFFERENTH.

Conceptually, it may be represented through the relation:

$A \rightarrow \text{DIFFERENTH} \rightarrow B$

or through the triadic structure:

- Algorithm;
- Data;
- Processor.

Core Principle

Every process may be analyzed through three fundamental components:

- Data;
- Processing;
- Result.

ADP-TRIFORMER is presented as a universal methodology for the analysis of difference-driven systems, transformations and emergent phenomena.

8. Fundamental Principles

The initial version of DIFFERENTH is founded upon the following core principles.

D1 - Without Difference, there is no Identification.

D2 - Relations among Differences generate Structure.

D3 - Interactions among Differences generate Dynamics.

D4 - Recursion among Differences generates Diversity.

D5 - CERELATH among Differences generates Connection.

D6 - Every Identification presupposes at least one Difference.

These principles constitute the foundational core of the DIFFERENTH framework.

9. Future Development

Planned Publications

The following documents are intended to expand and formalize the DIFFERENTH framework:

- DIFFERENTICS Manifesto
- Axiomatic Foundations of Differentics
- ADP-TRIFORMER Methodological Model
- Formal Differentics
- DIFFEREDITIONARY
- Differentics Whitepaper

This section serves as a public roadmap demonstrating that the broader architecture of the DIFFERENTH system had already been envisioned and outlined in 2026.

10. Declaration

Foundational Statement

This document publicly records the existence of the DIFFERENTH framework, its terminology, vision and foundational principles as formulated in 2026.

The present Manifesto is considered the primary founding document establishing the conceptual core and authorship record of the DIFFERENTH project.
